# Priced to Sell Mindset

**Determine:**

- What is Important to You?**
- What is Important to the Retailer?**
- How much you can Negotiate?**

# Purpose of Price – Capture Value

✧ **Actual** Value -- Cost Inputs

✧ **Perceived** Value -- Assumed Value

What is the difference?

Which is more important?

# Your Brand Positioning -- Price Point

- **How** do you want to be **perceived** in the market?  
Luxury --- Middle Market --- Mass?
- **Who** are your **target** customers – who will **pay**?
- **Where** do they **expect** to find you?
- **How** will you **tell** them where you are?

# Sales Channels – Where you Sell

- ◆ Channel Costs
- ◆ Direct to Consumer – **B2C**
- ◆ Indirect – Go Between – **B2B**
  - ◆ Wholesale
  - ◆ Sales Representative
  - ◆ Distributor

# Retailers Care About...

- **Merchandising** – Fit with assortment/brand appeal
- **Margin** – Profit and Markdown potential (sale)
- **Markup** – Keystone versus more markup
- **Movement** – Inventory Sell-through Speed/Turnover
- **Reliable Quality and On Time Delivery**
- **Responsiveness** - Ease of Communication
- **Flexible Payment Terms** – Depends on the Retailer

# You Care About...

- **All of the Above** – like the retailer, but also...
- **Incoterms** – Where merchandise changes ownership
- **Costs** – LDP/Marketing/Transportation/Insurance
- **Break-Even Point** – Sales and Unit Quantity
- **Gross Margin and Net Margin** - Top line and Bottom line Profit and your level of flexibility
- **Markup Strategy**- Having a Target Price
- **Product** – Sales Volume and Timeframe to sell
- **Payment** – How and When/Retailer Creditworthiness

# Product Costs

## **Components of Product Price:**

**1. Cost of Goods Sold = Labor + Materials**

**2. Overhead**

(includes Fixed Costs + Variable Costs)

**3. Profit**

# Export Costs – Landed Duty Paid (LDP)

## **Components of LDP:**

- 1. Cost of Goods Sold = Labor + Materials**
- 2. Transportation/Insurance Costs**  
(includes Fixed Costs + Variable Costs)
- 3. Duty and Taxes**

# Pricing Strategy

## Markup **versus** Margin

What is the difference?

Two perspectives on the relationship between price and cost.

# Capturing Value -- Markup

---

If the cost = \$10  
selling price = \$30

**What is the Markup?**

# Capturing Value --- Markup Formula

$$\text{Markup} = (\text{Price} - \text{Cost}) / \text{Cost}$$

Example:  $(\$30 - \$10) / \$10 = 2 * 100\% = 200\%$

**Am I charging enough?**

# Capturing Value -- Gross Margin = Gross Profit Formula

---

$$\text{Margin (Gross Margin)} = \frac{(\text{Price} - \text{Cost of Goods Sold})}{\text{Price}}$$

Example:  $(\$30 - \$10) / \$30 = 0.67$  or **67%**

**Am I making enough profit?**

# Break Even

1. When Expenses **Equal** Sales
2. The **Minimum Quantity** to Produce

It is the **Intersection** between:

- ✧ Cost
- ✧ Volume
- ✧ Profit

# Break Even Formula

Break Even = Fixed Costs / Contribution Margin\*

- ❑ Fixed Costs ---- Independent of sales
- ❑ Variable Costs --- Correlated to sales

# Break Even Formula

**\*Contribution Margin** can be expressed as a **percentage** or **dollar** amount (*Page 147*)

1. **Contribution Margin % = Unit Variable Cost / Unit Selling Price (Sales Needed)**
2. **Contribution Margin \$ = Unit Selling Price – Unit Variable Cost (Units Needed)**

# Break-Even Components

1. Select a **period of time** – e.g., 1 year or any period and use Income Statement
2. List all **fixed costs** – includes rent, insurance
3. List **variable costs** – connected to producing the sale, e.g., sales commissions, cost of goods

# Break-Even Example -- Sales

How Many **Sales** Needed to Break-Even?

1) **Variable Cost Percentage(VCP) =**

Unit Variable Cost/Unit Selling Price

$$\$10/\$30 = \mathbf{33.33\%}$$

2) **Contribution Margin % = 100%-VCP =**

$$100\% - 33.33\% = \mathbf{66.67\% = 0.6667}$$

3) **Break-Even Sales =**

**Total Fixed Costs/Contribution Margin%**

$$\$100,000/0.6667 = \mathbf{\$149,992 (150K)}$$

# Break-Even Example -- Units

Example: How Many **Units** Needed to Break-Even?

Fixed Costs / (Unit Selling Price - Unit Variable Cost)

$$\$100,000 / (\$30 - \$10) = \mathbf{5,000 \text{ Units}}$$

# WHAT IS THE GOAL OF A BUSINESS?

Profit! These formulas  
can inform better  
decisions.
